Note to use api

In question 1, you have to provide question number and answer. Userid is not required. It returns user id generated automatically.

In question 3, you have to provide file as argument in answer and userid as provided in question 1.

In other question , you have to provide three parameters i.e. user id that was provided in question 1, email and question no

I have created reat apis. A variable named answer can be string or file but on swagger it takes value of string only in string form.
But it is working perfectly on postman.
